

## MEDICAL COVERAGE POLICY

**SERVICE:** Lyfgenia™ (Lovotibeglogene autotemcel)

**Policy Number:** 311

**Effective Date:** 9/1/2024

**Last Review:** 6/10/2024

**Next Review:** 6/10/2025

**Important note:** Unless otherwise indicated, medical policies will apply to all lines of business.

Medical necessity as defined by this policy does not ensure the benefit is covered. This medical policy does not replace existing federal or state rules and regulations for the applicable service or supply. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan documents. See the member plan specific benefit plan document for a complete description of plan benefits, exclusions, limitations, and conditions of coverage. In the event of a discrepancy, the plan document always supersedes the information in this policy.

**SERVICE:** Lovotibeglogene autotemcel (Lyfgenia™)

**PRIOR AUTHORIZATION:** **Required**

**POLICY:** Please review the plan's EOC (Evidence of Coverage) or Summary Plan Description (SPD) for details.

**For Medicare plans,** please refer to appropriate Medicare NCD (National Coverage Determination) or LCD (Local Coverage Determination). Medicare NCD or LCD specific InterQual criteria may be used when available. If there are no applicable NCD or LCD criteria, use the criteria set forth below.

**For Medicaid plans,** please confirm coverage as outlined in the [Texas Medicaid Provider Procedures Manual | TMHP](#) (TMPPM). Texas Mandate HB154 is applicable for Medicaid plans. If there are no applicable criteria to guide medical necessity decision making in the TMPPM, refer to InterQual. If there are no applicable criteria to guide medical necessity decision making in the TMPPM or InterQual, use the criteria set forth below.

Baylor Scott & White Health Plan (BSWHP) may consider lovotibeglogene autotemcel (Lyfgenia™) medically necessary for the treatment of Sickle Cell Disease (SCD) when ALL of the following criteria are met:

1. Member has a contraindication to exagamglogene autotemcel (Casgevy™); **AND**
2. Lovotibeglogene is being prescribed by or in consultation with a board-certified hematologist; **AND**
3. Member is 12 years of age or older, but less than or equal to 50 years of age; **AND**
4. Member has a Karnofsky performance status of  $\geq 60\%$  for subjects  $\geq 16$  years of age or Lansky performance status of  $\geq 60\%$  for subjects  $< 16$  years of age; **AND**
5. Member has one of the following genotypes confirmed by molecular or genetic testing:
  - a)  $\beta S/\beta S$
  - b)  $\beta S/\beta^0$ ;
  - c)  $\beta S/\beta^+$ ; **AND**
6. Member will receive lovotibeglogene autotemcel at an [activated qualified treatment center](#); **AND**
7. Member has experienced hydroxyurea failure, intolerance, or has a contraindication; **AND**
8. Member is eligible for autologous hematopoietic stem cell transplant (aHSCT); **AND**

## MEDICAL COVERAGE POLICY

**SERVICE:** Lyfgenia™ (Lovotibeglogene autotemcel)

**Policy Number:** 311

**Effective Date:** 9/1/2024

**Last Review:** 6/10/2024

**Next Review:** 6/10/2025

9. Member does Not have an available human leukocyte antigen (HLA)-matched related donor; **AND**
10. Member has Not received any of the following:
  - a) Hematopoietic stem cell transplant (HSCT)
  - b) Lovotibeglogene autotemcel or any other gene therapy for SCD
  - c) Investigational cellular therapy for SCD; **AND**
11. Lovotibeglogene autotemcel will Not be used concomitantly with other gene editing therapies for SCD; **AND**
12. Lovotibeglogene autotemcel will be dosed and administered according to FDA approved labeling; **AND**
13. Member has experienced  $\geq 4$  severe vaso-occlusive events (sVOE) over the previous 2 years while receiving appropriate supportive care (e.g. pain management plan).

Severe vaso-occlusive episode (sVOE) defined as:

- a) Acute pain events that required a visit to a medical facility and administration of pain medications (opioids or intravenous non-steroidal anti-inflammatory drugs) or RBC transfusions
  - b) Acute chest syndrome, as indicated by the presence of a new pulmonary infiltrate associated with pneumonia-like symptoms, pain, or fever
  - c) Priapism lasting  $> 2$  hours and requiring a visit to a medical facility
  - d) Splenic sequestration, as defined by an enlarged spleen, left upper quadrant pain, and an acute decrease in hemoglobin concentration of  $\geq 2$  g/dL
  - e) Acute hepatic sequestration, defined by a sudden increase in liver size associated with pain in the right upper quadrant, abnormal results of liver function test not due to biliary tract disease, and reduction in Hb concentration by  $\geq 2$  g/dL below the baseline value; **AND**
14. Member does Not have any of the following:
    - a) Absolute neutrophil count of  $< 1 \times 10^9/L$  ( $< 0.5 \times 10^9/L$  for subjects on hydroxyurea)
    - b) Platelet count  $< 100 \times 10^9/L$
    - c) Baseline left ventricular ejection fraction (LVEF)  $< 45\%$  by echocardiogram
    - d) Baseline estimated glomerular filtration rate  $< 70$  mL/min/1.73 m<sup>2</sup>
    - e) History of iron overload or serum ferritin levels  $> 1000$  ng/mL and a cardiac MRI T2\*  $< 10$  ms
    - f) Advanced liver disease, as defined by any one of the following:
      - I. Persistent aspartate transaminase, alanine transaminase, or direct bilirubin value  $> 3 \times$  the upper limit of normal (ULN)
      - II. Baseline prothrombin time or partial thromboplastin time  $> 1.5 \times$  ULN, suspected of arising from liver disease
      - III. MRI of the liver demonstrating clear evidence of cirrhosis
      - IV. If ineligible for liver biopsy the following MRI findings are exclusionary:
        - 1) MRI findings suggestive of active hepatitis
        - 2) Significant fibrosis
        - 3) Inconclusive evidence of cirrhosis

## MEDICAL COVERAGE POLICY

**SERVICE:** Lyfgenia™ (Lovotibeglogene autotemcel)

**Policy Number:** 311

**Effective Date:** 9/1/2024

**Last Review:** 6/10/2024

**Next Review:** 6/10/2025

- 4) Liver iron concentration  $\geq 15$  mg/g
- V. If eligible for liver biopsy and MRI findings are suggestive of active hepatitis, significant fibrosis, inconclusive evidence of cirrhosis, or liver iron concentration  $\geq 15$  mg/g any evidence of the following upon liver biopsy are exclusionary:
  - 1) Cirrhosis
  - 2) Bridging fibrosis
  - 3) Significant active hepatitis
- g) Clinically significant, active bacterial, viral, fungal, or parasitic infection
- h) Any prior or current malignancy except previously treated, non-life threatening, cured tumors
- i) Any prior or current immunodeficiency disorder
- j) Positive for presence of HIV-1 or HIV-2, hepatitis B DNA (HBV DNA), or human T-lymphotropic virus-1 or -2
- k) Detectable hepatitis C viral load
- l) More than two  $\alpha$ -globin gene deletions
- m) Unable to receive RBC transfusion
- n) Contraindication to plerixafor, busulfan, or anesthesia
- o) Immediate family member with a known or suspected Familial Cancer Syndrome (including hereditary breast and ovarian cancer syndrome, hereditary non-polyposis colorectal cancer syndrome, and familial adenomatous polyposis)
- p) Need for therapeutic anticoagulation treatment during the period of conditioning through platelet engraftment
- q) Clinically significant pulmonary hypertension at baseline, as defined by the requirement for ongoing pharmacologic treatment or the consistent or intermittent use of supplemental home oxygen
- r) Pregnancy or breastfeeding
- s) History of a significant bleeding disorder

**Only ONE dose per lifetime is medically necessary.**

**All requests will be reviewed by a clinical pharmacist and medical director.**

BSWHP considers lovotibeglogene autotemcel (Lyfgenia™) for the treatment of all other indications to be experimental, investigational, and/or unproven.

### BACKGROUND:

Sickle Cell Disease (SCD) is a single-gene disorder in which 1 DNA base-pair alteration in the gene coding for hemoglobin produces sickle hemoglobin (HbS) when inherited in an autosomal recessive fashion with a second HbS or when combined with other hemoglobin variants (e.g., HbC or  $\beta$ -thalassemia). When deoxygenated within capillary beds sickle hemoglobin forms long chains which distorts the red blood cell (RBC) into a sickle shape. Sickled RBCs have increased adhesion molecules compared to normal RBCs that facilitate binding to endothelial walls. In addition, Sickle cells hemolyze

## MEDICAL COVERAGE POLICY

**SERVICE:** Lyfgenia™ (Lovotibeglogene autotemcel)

**Effective Date:** 9/1/2024

**Last Review:** 6/10/2024

**Next Review:** 6/10/2025

rapidly. Recurrent RBC sickling and hemolysis, combined with endovascular inflammation, result in acute and chronic organ damage at the cellular level, associated with acute, unpredictable, and potentially life-threatening complications.<sup>1</sup>

In the US, approximately 100,000 people have SCD. Children born in the US may be diagnosed shortly after birth through newborn screening programs. SCD is characterized by hemolytic anemia, acute and chronic pain, acute chest syndrome; increased incidence of stroke, nephropathy, and retinopathy; and a life span that is 20 years shorter than the general population.<sup>1</sup> A cure for SCD today is a stem cell transplant from a matched donor, but this option is only available to a small fraction of patients living with SCD because of the lack of available donors.<sup>3</sup>

Lovotibeglogene autotemcel (Lyfgenia™) is an autologous hematopoietic stem cell-based gene therapy indicated for the treatment of patients 12 years of age or older with sickle cell disease and a history or vaso-occlusive events.<sup>2</sup>

Lyfgenia is a  $\beta^{A-T87Q}$ -globin gene therapy consisting of autologous CD34+ cells from patients with sickle cell disease containing hematopoietic stem cells (HSCs) transduced with BB305 LVV encoding  $\beta^{A-T87Q}$ -globin, suspended in cryopreservation solution. Lyfgenia is intended for one-time administration to add functional copies of a modified form of the  $\beta$ -globin gene ( $\beta^{A-T87Q}$ -globin) into the patient's own HSC.<sup>2</sup>

Lyfgenia is prepared using the patient's own HSCs, which are collected via apheresis procedure(s). The autologous cells are enriched for CD34+ cells, then transduced ex vivo with BB305 LVV. The transduced CD34+ cells are washed, formulated into a suspension, and then cryopreserved. LYFGENIA is frozen in a patient-specific infusion bag(s) and is thawed prior to administration.<sup>2</sup>

After LYFGENIA infusion, the transduced CD34+ HSCs engraft in the bone marrow and differentiate to produce red blood cells containing biologically active  $\beta^{A-T87Q}$ -globin that will combine with  $\alpha$ -globin to produce functional Hb containing  $\beta^{A-T87Q}$ -globin (HbA<sup>T87Q</sup>).<sup>2</sup>

HbA<sup>T87Q</sup> has similar oxygen-binding affinity and oxygen hemoglobin dissociation curve to wild type HbA, reduces intracellular and total hemoglobin S (HbS) levels, and is designed to sterically inhibit polymerization of HbS thereby limiting the sickling of red blood cells.<sup>2</sup>

The efficacy of Lyfgenia was studied in a single-arm, 24-month, open-label, multicenter Phase 1/2 (NCT02140554, Study 1-C) and continued on a long-term follow-up study. In Study 1-C, 36 patients received the intravenous infusion of Lyfgenia. Patients with a history of at least 4 VOEs in the 24 months prior to informed consent (n=32) were included in the VOE efficacy outcomes. The efficacy outcomes were complete resolution of Vaso-occlusive Events (VOE-CR) and severe VOEs (sVOE-CR) between 6 months and 18 months after infusion of Lyfgenia.<sup>2</sup>

In HBG-206 Group C (n=32), 88% (95% CI) of patients experienced complete resolution of VOEs and 94% (95% CI) of patients experienced complete resolution of severe VOEs through 18 months post infusion with Lyfgenia.<sup>2</sup>

## MEDICAL COVERAGE POLICY

**SERVICE:** Lyfgenia™ (Lovotibeglogene autotemcel)

**Policy Number:** 311

**Effective Date:** 9/1/2024

**Last Review:** 6/10/2024

**Next Review:** 6/10/2025

The median (min, max) duration of follow-up for the patients in the study is 38 (12, 61) months post Lyfgenia infusion. After the primary evaluation period to last follow-up, 4 of 32 patients who achieved VOE-CR experienced VOEs while maintaining globin response. After the primary evaluation period up to 24 months, 17 of 35 (49%) patients were prescribed opioids for sickle cell and non-sickle cell-related pain.<sup>2</sup>

### CODES:

**Important note:** Due to the wide range of applicable diagnosis codes and potential changes to codes, an inclusive list may not be presented, but the following codes may apply. Inclusion of a code in this section does not guarantee that it will be reimbursed, and patient must meet the criteria set forth in the policy language.

CPT Codes:	96413 - Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug
HCPCS Codes:	J3590 - Unclassified biologics
ICD10 codes:	D57.00 Hb-Ss Disease With Crisis, Unspecified D57.01 Hb-Ss Disease With Acute Chest Syndrome D57.02 Hb-Ss Disease With Splenic Sequestration D57.03 Hb-Ss Disease With Cerebral Vascular Involvement D57.04 Hb-Ss Disease With Dactylitis D57.09 Hb-Ss Disease With Crisis With Other Specified Complication D57.1 Sickle-Cell Disease Without Crisis D57.20 Sickle-Cell/Hb-C Disease Without Crisis D57.211 Sickle-Cell/Hb-C Disease With Acute Chest Syndrome D57.212 Sickle-Cell/Hb-C Disease With Splenic Sequestration D57.213 Sickle-Cell/Hb-C Disease With Cerebral Vascular Involvement D57.214 Sickle-Cell/Hb-C Disease With Dactylitis D57.218 Sickle-Cell/Hb-C Disease With Crisis With Other Specified Complication D57.219 Sickle-Cell/Hb-C Disease With Crisis, Unspecified D57.40 Sickle-Cell Thalassemia Without Crisis D57.411 Sickle-Cell Thalassemia, Unspecified, With Acute Chest Syndrome D57.412 Sickle-Cell Thalassemia, Unspecified, With Splenic Sequestration D57.413 Sickle-Cell Thalassemia, Unspecified, With Cerebral Vascular Involvement D57.414 Sickle-Cell Thalassemia, Unspecified, With Dactylitis D57.418 Sickle-Cell Thalassemia, Unspecified, With Crisis With Other Specified Complication D57.419 Sickle-Cell Thalassemia, Unspecified, With Crisis D57.42 Sickle-Cell Thalassemia Beta Zero Without Crisis D57.431 Sickle-Cell Thalassemia Beta Zero With Acute Chest Syndrome D57.432 Sickle-Cell Thalassemia Beta Zero With Splenic Sequestration D57.433 Sickle-Cell Thalassemia Beta Zero With Cerebral Vascular Involvement D57.434 Sickle-Cell Thalassemia Beta Zero With Dactylitis D57.438 Sickle-Cell Thalassemia Beta Zero With Crisis With Other Specified Complication D57.439 Sickle-Cell Thalassemia Beta Zero With Crisis, Unspecified D57.44 Sickle-Cell Thalassemia Beta Plus Without Crisis D57.451 Sickle-Cell Thalassemia Beta Plus With Acute Chest Syndrome D57.452 Sickle-Cell Thalassemia Beta Plus With Splenic Sequestration D57.453 Sickle-Cell Thalassemia Beta Plus With Cerebral Vascular Involvement
